

HCT01

Humidity / Temperature Sensor

HCT01 humidity/temperature sensors combine high quality, long time approved thin-film sensor technology simple processability and the possibility of a cost-efficient integration into customer application.

The pre-adjusted capacitive E+E humidity sensorelement saves complicated and time-consuming humidity adjustment. Highly accurate thin-film elements are used for the temperature measurement – a must for precise dew point determination.

The DFN packaging guarantees maximum mechanical sensor protection and enables reflow soldering. A protective film on the surface of the humidity sensor ensures extensive protection against contamination like dust, salt or chemical deposit.

Depending on the individual application, accuracy requirements and existing interface electronics, different cost-saving evaluation circuitries are available. Do not hesitate to contact our specialists for further information and design-in support.

Features

- RH and T sensor in one package**
- RH adjusted**
- mature humidity sensor technology**
- high temperature accuracy**
- reflow solderable**
- integrated dust filter**
- standardized DFN package**

Basic Design

Accuracy for rH and T

Technical Data

Humidity Element

Working range	humidity:	0...100% RH	
	temperature:	-40...140°C (-40...284°F)	
Nominal capacitance C_0		70,1pF	
Accuracy RH at 30°C	HCT01-00:	non adjusted	
	HCT01-02:	±2% RH (30...70% RH)	±3% RH (0...90% RH)
	HCT01-03:	±3% RH (30...70% RH)	±4.5% RH (0...90% RH)

Sensitivity	0.25 pF / % RH
Temperature dependence ¹⁾	$dC = -0,00083 \cdot RH(T-30^\circ C)$ [pF]
Hysteresis	$1.7 \pm 0.15\%$ RH
Maximum supply voltage (no DC voltage)	5V max (U _{pp})
Maximum DC voltage	< 0.3V
Parallel Resistance	$R_p \geq 100 \text{ M}\Omega$
Serial Resistance	$R_s \leq 1200 \Omega$
Response time	$t_{63} \leq 6s$
Material housing	plated Cu lead-frame and green epoxy-based compound fully RoHS and WEEE compliant
Lead finish	NiPdAu
Sensor protection	E+E coating
Storage temperature	-40...55°C (-40...131°F)
Dimensions	5x5x0.95 mm
Packaging	tape and reel

Temperature Element	Mo3k	Pt1000
Nominal resistance (at 25°C / 77°F)	$R_{25} = 3000 \text{ Ohm}$	$R_0 = 1000 \text{ Ohm}$
Accuracy	$dt = \pm[0.2+0.008 \cdot (t-25)] \text{ K}$	DINB
Response time	$t_{63} \leq 6s$	
Characteristics	$R = R_0 \cdot (1+A \cdot t + B \cdot t^2)$ $R_0 = 2785.88 \text{ Ohm}$ $A = 0.0030659$ $B = 3.41 \cdot 10^{-7}$	acc. EN60751
Maximum continuous current ($t_{LL} < t_A < t_{UL}$)	0,1mA (I_{cont})	
Maximum current	1mA (I_{max})	
Self heating	0,35 K/mW

Working Range

The working range is shown with regard to the humidity / temperature limits.

Although the sensors would not fail beyond the limits, the specification is guaranteed only within the working range.

In applications with high humidity at high temperatures the time factor shall be considered.

HCT01

Characteristic Humidity Element

The average increase of capacitance over the working range is app. 25 pF. For the range of 0–98% RH linear approximation is possible, errors will be lower than $\pm 1.5\%$ RH.

The sensor characteristic is determined by the following linear formula:

$$C(U_W) = C_0 * [1 + HC_0 * U_W] \quad C_0 = 70.1 \text{ pF}$$

with $HC_0 = 3420 \pm 191 \text{ ppm /\% RH}$

For high accuracy requirements, the sensitivity is determined by the following polynomial:

$$C(U_W) = C_0 * [1 + HC_0 * U_W + k(U_W)]$$

whereby:

$$k(U_W) = A_1 * U_W + A_2 * U_W^{1.5} + A_3 * U_W^2 + A_4 * U_W^{2.5}$$

$$A_1 = 2.6657E^{-3} \quad A_2 = -9.6134E^{-4}$$

$$A_3 = 1.1272E^{-4} \quad A_4 = -4.3E^{-6}$$
