

New Feature Announcement

MULTIPLE GAS CURVES

External Corrections for Multiple Gas Curves

Kurz responded to requests for supporting up to five predetermined, separate gas curves. This allows for measuring and controlling different gases at different phases of a process (such as a product gas followed by a purge gas), using the flow meter in other applications, or using the flow meter as a spare for other processes. This feature restricts the use of VTM.

- Up to five predetermined gas curves
- Gas curve selection capability accessed via meter keypad or remote contact
- Supports multiple phases of a process
- Allows multiple applications
- Provides a spare for other processes

Five curves for multiple gas compositions.

To select the multiple gas curve capability defined in the Specialty Gas or Gas Type feature:

454FTB	Feature 8, Contact the Regional Sales Manager for allowances and limitations
454FTB-WGF	Feature 10, Option M through Q
504FTB	Feature 6, Contact the Regional Sales Manager for allowances and limitations
534FTB	Feature 6, Contact the Regional Sales Manager for allowances and limitations
